                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                              This cDNA sequence encodes the light chain variable region VL
(AAW85149) of monoclonal anti-idiotype antibody 11D10 produced by
the particular of monoclonal anti-idiotype antibody 11D10 produced by
the bybridoma cell line AFCC 12020. 11D10 was obtained by immunising
naive mice with MC-10 anti-HMFG antibody to obtain an anti-idiotype
response. It elicits an immune response against a specific epitope
of a high mol.wt. mucin of human milk fat globule (HMFG). It
induces an immunological response to HMFG in mice, rabbits, monkeys
and patients with advanced HMFG-associated tumours. Pharmaceutical
compositions and vaccines comprising 11D10, 11D10 polypeptides
cand/or 11D10 polynucleotides are claimed. Also claimed are
diagnostic kits and methods of using 11D10, 11D10 polypeptides
associated tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CTCACTTGTCGGGCAAGTCAGGACATTGGTATTAACTTACATTGGCTTCAGCAGGAACCA

This anti-idiotype antibody is used to delay the development of, or treat, a human milk fat globule (HMFG) associated tumour in an individual having low tumour burden. The antibody 11D10 is used to prevent the recurrence of HMFG-associated tumours e.g. ovarian, non-small cell lung and pancreatic carcinoma, especially for treating breast tumours.

The method of the invention involves administering an anti-idiotypic antibody for HMFG (e.g. 11D10), and an anti-idiotypic antibody for CEA (e.g. 3H1). The method is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The present sequence encodes mouse light chain variable region. This recombinant DNA is derived from PCR A which amplifies antibody light chain variable region (VL). The transformant produced using the VL gene was used transform competent E. coli cells. The peptide produced by transformants neutralises interleukin-18. This is useful for treating and preventing immunopathies, inflammatory disorders and autoimmune diseases which are caused by excessive immunosaction. The peptide has anti-allergic, anti-inflammatory, immunosuppressive, hematopoletic, leukocytopoietic, antialgic, antipyretic and hepatic-function improving
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       181 GATGGAACTATTAAACGCCTGATCTACGCCACATCCAGTTTAGGTTCTGGTGTCCCCAAA 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The pref. vector or plasmid of the invention has a double-stranded DNA seq. coding for a variable region of a light or heavy chain of 1gG, or for a variable region of a light or heavy chain of an immunoglobulin specific for an enzyme or surface protein. The sequence esp. codes for a variable region of a light chain having 95-115 AAs or for a variable region of a heavy chain having 110-125 AAs esp. including the D region of the heavy chain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel recombinant conjugate antibody molecules comprise a monoclonal antibody specific for a surface structure of antigen presenting cells (APC), genetically modified to contain at least one antigen cells (APC), genetically modified to contain at least one antigen cells (APC), genetically modified to contain at least one antigen cells of delivering the antigen to APC and eliciting an immune response to the antigen. The new conjugates are useful as vaccines and are able to elicit an enhanced immune response without the use of an adjuvant. In a specific example, a conjugate was constructed using the murine anti-human class II monoclonal antibody secreted by hybridoma anti-human class II monoclonal antibody secreted by hybridoma tandemly linked T and B cell epitope derived from HIV MN strain. The present sequence encodes the light chain variable region which was PCR amplified from 44H104 and used in the preparation of a conjugate with antigen CLTB36.

Presenting cells of the immune system. The conjugate antibody is formulated as a vaccine to protect a host against a disease caused by a pathogen expressing the antigen. The antibody is useful as a detecting agent. The present sequence is murine 44H104 mab variable light chain (VL) DNA.

A single chain Fv (sFv) is a covalently linked VH-VL heterodimer which is expressed from a gene fusion including VH- and VL-encoding genes connected by a peptide-encoding linker. Such linker sequences are set forth in AA residues 116-135 in AAR39569, which includes part of the 16 AA inthody, a single chain polypeptide can be produced having a binding affinity for a c-erbB-2 related antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GATGTGACATCCAGATGACCCAGTCTCCATCCTCCTTATCTGCCTCTCTGGGACAAAGAG

construct. This was constructed by connecting the Vh and VI genes with a DNA sequence encoding a Serine rich linker. 520C9 is a monoclonal antibody useful in targeting c-erbB-2 antiben. This dimeric construct can be used in the methods of invention of imaging a preselected antigen expressed in a mammal. The methods are used in magnetic resonance imaging of c-erbB-2 or related antigens in cancer diagnosis. The blosynthetic constructs have enhanced properties as in vivo targetting agents in comparison with intact monoclonal antibodies or their Fab fragments. The antigen with greater apparent avidity, including of an epitope on an antigen with greater apparent avidity, including greater tumour specificity, tumour localisation and tumour retention properties than that of the Fab fragment having the same CDRS as the construct.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Variable heavy (VH) and variable light (VL) genes were cloned from a 520C9 hybridoma cDNA library, using probes directed toward the antibody constant and joining regions. A two single chain FV (SFV) gene was constructed by connecting the VH and VL genes with a Ser rich polypeptide linker. The resulting 520C9 two sFV gene, transformed into E. coll, and protein expression vector, addn. of IPTG to the culture medium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A composin. comprising a carrier and the 2 sFv protein prod. can be used for in vivo imaging, and drug targetting experiments. The EsFv protein prod. is a homodimer, in which both fragments target the same antigen, therefore giving greater binding avidity and longer tissue retention times, compared to individual sFv protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Compsns. contg. antigen-targetting antibody fragment constructs comprising dimer of single-chain Fv fragments

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  574
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  634
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes an an antibody 520C9 sFV. Variable heavy and light sequences of antibody 7520C9 are connected, together with a serine linker, to produce the present single chain FV gene. The present sequence exemplifies the invention. Dimers of the single chain FV are used for targeted delivery of drugs or imaging agents (e.g. cytotoxins, prodrugs or 99m-technetium) to antigen-expressing cells, particularly for treatment or diagnosis of tumours (especially of ovary or breast).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AACCAGATGGAACTATTAAACGCCTGATCTACGCCACATCCAGTTTAGGTTCTGGTGTCC

                                                                                                                                                                                                                                                to transform competent E. coli cells. The peptide produced by transformants designated Escry#125-2H.HT, neutralises interleukin-18. This is useful for treating and preventing immunopathies, inflammatory disorders and autoimmune diseases which are caused by excessive immunoreaction. The peptide has anti-allergic, anti-inflammatory, immunosuppressive, hematopotetic, leukocytopotetic, antialgic, antipyretic and hepatic-function improving activities. The DNA is also useful for the production of transgenic animals and plants.
                                                                                                                                                                         New artificially produced peptide for neutralizing biological activity of interleukin-18, useful for treating and preventing immunopathies, inflammatory disorders and autoimmune diseases

The present sequence is pBscFv#125-2H recombinant cDNA. This was used to transform competent E. coli cells. The peptide produced by transformants designated EscFv#125-2H, neutralises interleukin-1B. This is useful for treating and preventing immunopathies, inflammatory disorders and autoimmune diseases which are caused by excessive immunoraction. The peptide has anti-allorgic, anti-inflammatory, immunosupressive, hematopoletic, leukocytopoietic, anti-inflammatory antipyretic and hepatic function improving activities. The DNA is also useful for the production

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present cDNA sequence derived from hybridoma #125-2H, encodes mouse anti-interleukh-18 antibody light chain variable region (VL). It can be used in the production of recombinant monoclonal antibody #125-2HmAb, which is capable of neutralising biological activities of interleukin-18. The antibody has antiinflammatory, immunosuppressive, leucocytopoietic, antiallergic antiaplace, antiallergic and hepatotropic activity and can be used for prevention and treatment of autoimmune diseases, immunopathies and inflammatory disorders caused by excessive immunoreaction.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Description

                                                                                                                                                                                                                                                                                                                                                                          hybridoma cell line ATCC 12020. IDEO was obtained by immunishing hybridoma cell line ATCC 12020. IDEO was obtained by immunishing native mice with MC-10 anti-HMFG antibody to obtain an anti-idiotype response. It elloits an immune response against a specific epitope of a high mol.wt. mucin of human milk fat globule (HMFG). It induces an immunological response to HMFG in mice, rabbits, monkeys and patients with advanced HMFG-associated tumours. Pharmaceutical compositions and vaccines comprising 11D10, 11D10 polypeptides and/or 11D10 polynucleotides (see also AAT85149-50) are claimed. Also claimed are diagnostic kits and methods of using 11D10, 11D10 polypeptides and/or 11D10 polynucleotides, including methods of treating HMFG-associated tumours. IlD10 is also used in a claimed method of palliating HMFG-associated disease and in claimed kits to
                                                                                                                                                                                                                                                                                                                                                                   This polypeptide sequence comprises the light chain variable region

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises a method for delaying the development of, or treating a tumour that is associated with human milk fat globules (HMFG) or carcinoembryonic antigen (CEA). The method of the invention involves administering an anti-idiotypic antibody for HMFG (e.g. 11D10), and an anti-idiotypic antibody for CEA (e.g. 3H1). The method is useful for pelaying the development, of or treating HMFG/CEA-associated tumours. The present amino acid sequence represents the light chain variable region of the mouse 11D10 anti-idiotype antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DGTIKRLIYATSSLGSGVPKRFSGSRSGSDYSLTISSLESEDFVAYYCLQYASSPYTFGG 120

This anti-idiotype antibody is used to delay the development of, or treat, a human milk fat globule (HMFG) associated tumour in an individual having low tumour burden. The antibody 11D10 is used to prevent the recurrence of HMFG-associated tumours e.g. ovarian, non-small cell lung and pancreatic carcinoma, especially for treating breast tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Delaying development of, or treating, HMFG-associated tumours - using anti-idiotype antibody 11D10 raised against antibodies to human milk fat globule protein

The conjugate is capable of delivering the antigen to APC and eliciting an immune response to the antigen. The new conjugates are useful as vaccines and are able to elicit an enhanced immune response without the use of an adjuvant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  In a specific example, a conjugate was constructed using the murine anti-human class II monoclonal antibody secreted by hybridoma 44H104. The peptide CLTB36 was chosen as antigen; it consists of a tandemly linked T and B cell epitope derived from HIV MN strain. The present sequence represents the light chain variable region from 44H104 which was used in the preparation of a conjugate with

Novel recombinant conjugate antibody, useful as a vaccine against pathogens having a specific antigen, comprises a monoclonal antibody specific for an antigen presenting cell surface structure -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a recombinant conjugate antibody, comprising a monoclonal antibody specific for a surface structure of antigen presenting cells genetically modified to contain an antigen molety for the purpose of delivery of the antigen molety to antigen molety presenting cells of the immune system. The conjugate antibody is formulated as a vaccine to protect a host against a disease caused by a pathogen expressing the antigen. The antibody is useful as a detecting agent. The present sequence is murine 44H104 mab variable light chain (VL), alternative version.

Note: This sequence SEO. ID. NO:2 is stated to be similar to the sequence shown in fig 1A (AAE20200). However these sequences differ.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a recombinant conjugate antibody, comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel recombinant conjugate antibody, useful as a vaccine against pathogens having a specific antigen, comprises a monoclonal antibody specific for an antigen presenting cell surface structure -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    a monoclonal antibody specific for a surface structure of antigen presenting cells genetically modified to contain an antigen moiety for the purpose of delivery of the antigen moiety to antigen. Presenting cells of the immune system. The conjugate antibody is formulated as a vaccine to protect a host against a disease caused by a pathogen expressing the antigen. The antibody is useful as a detecting agent. The present sequence is murine 44H104 mab variable
                                                                                                                                                                                                                   Murine; mab; light chain; VL; conjugate antibody; antigen delivery;
immune system; vaccine; detecting agent; antibacterial

invention relates to a monoclonal antibody (MAD) with an isotype that fixes complement and a variable region that binds to the epitope on CD147 bound by the IgM MAD ADX-CBL, providing that the antibody is not CBL1. The MAD can selectively kill activated T-cells, activated B-cells or resting or activated monocytes. The products and methods can be used for treating diseases involving activated T-cells or B-cells or monocytes, e.g. graft versus host disease (GVHD), organ transplant rejection diseases (e.g. renal transplant, ocular transplant), cancers of the blood (e.g. leukaemia's and lymphomas) and pancreatic), autoimmune diseases (e.g. lupus), and inflammatory diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Catalytic; antibody; phage display; immunising; phage expression vector;

                                                                                                                                                                                                                                                                                                   AAR74960-R74969 are clones of the anti-idiotype antibodies Idio3, Idio20, Idio20, Idio27 and Idio33 against a human anticancer monoconal antibody. These antibodies and DNA encoding them are useful in pharmacological, medical and biochemical fields of research.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hales J;
